

ABSTRACT

The present invention prevents tablets from bouncing in a tablet drop guide path so that dropping time can be shortened so as to be ready in time for packing. In a
5 tablet packing apparatus provided with a tablet drop guide path 12 that guides tablets to a packing unit, the tablets drop obliquely downward from each of tablet outlets 10 of tablet feeders 8 provided in an up and down direction in a manner of multistage shelf, wherein a bounce preventing member 14 is provided in a position opposing to the tablet outlets of the tablet drop guide path, and wherein the bounce preventing member 14 is
10 obliquely provided so that it recedes from the tablet outlets 10 toward the lower end.
